

Energy Boosters

Ways to Get You Through the Day

Rebecca Jones

No amount of coaxing, pleading, or pedal pumping could get the engine in the rental car to turn over. It was going nowhere. The travelers had filled the car with unleaded fuel, but it had a diesel engine. It had been able to run a little way on the wrong fuel, but not far. And when it finally stopped, it stopped for good.

Sometimes cars and humans aren't so different. Both need the right fuel to run at maximum efficiency. Put too much of the wrong stuff in, and a breakdown may be unavoidable.

Here are some tips to keep your body humming along like a well-tuned engine, full of energy.

so-called "energy bars" are unpalatable but good for you, while candy bars are delicious but bad. Many energy bars are filled with sugar, so read labels, and look for high fiber, high protein, and limited carbs.

Nuts are among the best choices for healthy, pick-me-up snacks, nutritionists say. Nuts such as almonds, Brazil nuts, cashews, and hazelnuts are all loaded with magnesium, a mineral whose health benefits include improving heart health, decreasing the risk of diabetes, reducing stress, improving muscle functioning, and reducing insomnia.

Another super snack food is dark

You know you're supposed to get your eight hours!

Be Snack Smart

Strategic snacking can be a good way to smooth out dips in your energy level and avoid hunger cravings that can lead you to overeat when you finally do sit down to a full meal. So go ahead and snack. Just be as choosy in your snack selection as you are in meal planning.

chocolate, which is rich in heart-protecting antioxidants and can improve blood flow, which will energize flagging muscles. Even milk chocolate gets a thumbs up because it provides calcium for the bones. So enjoy it--in moderation.

Stay Hydrated

Just because you're not thirsty does not mean you aren't dehydrated, and even slight dehydration can leave you tired and lethargic. The answer is, of course, to drink plenty of water. If the taste of plain water doesn't excite you, consider some of the flavored varieties, keeping in mind that loads of extra sugar should be avoided.

One increasingly popular healthy hydration alternative is coconut water, which studies suggest may hydrate more quickly than plain H₂O and which contains more potassium and less sodium than other energy drinks.

Massage and More

The inherent demands of your life may lead to muscle strains, stress, and other conditions that can affect your energy levels. One of the best strategies is to get into a regular pattern of receiving massage. If you feel the need for some quick bodywork between sessions, consider self-massage possibilities.

One option is to use a foam roller, a firm foam log that comes in varying thicknesses--think of them as comfy rolling pins. You can use your own body weight to generate direct pressure as you roll over the roller, working out muscle knots.

Aromatherapy is also a great way to get a quick energy boost, as certain scents are able to fight fatigue. Queen among them is peppermint, and other lethargy busters include eucalyptus, citrus, cardamom, and even cinnamon and black pepper.

Get Some Rest

The number one myth about sleep is that you can get by on six hours a night. The truth is that the further away you deviate from getting eight hours sleep a night--and some people get too much, not too little--the greater the risk of cardiovascular disease, depression, obesity, and a host of other maladies.

Make sleep a priority. Get on a regular schedule, stick to it, and stop allotting to sleep only whatever time is left over after everything else gets accomplished. Once you've gone to bed, though, you have to actually go to sleep, and for many people that's no easy feat.

Caffeine is often the culprit. Caffeine is a great pick-me-up first thing in the morning, but it has a six- to seven-hour "half-life," meaning that half the caffeine in that cup of coffee you consumed to ward off the 3:00 p.m. doldrums will still be lingering in your bloodstream after the 10:00 p.m. news.

Another stimulant many people don't often consider is light--particularly light from a computer or television screen. Dim light from a soft reading lamp is fine, but the bright blue light of electronic devices sears itself into our minds and fools them into thinking it's still daylight outside, which makes falling asleep seem unnatural.

Heat, whether internal or external, will also disrupt sleep. The ideal room temperature for sleeping is around 65 degrees. The cool air then wicks away heat from your body, which allows you to fall asleep. Anything you do to

increase your body's core temperature, like exercising or eating a big meal right before bedtime, makes it harder for your body to cool down to a comfortable sleeping temperature.

Naps are tricky luxuries. Taken wisely and in moderation, they'll restore mental alertness and fuel you through a long afternoon. But too long a nap or a poorly-timed nap will leave you feeling drained after you get up, and will make it harder to fall asleep come bedtime. Timing also matters. Grab a morning nap to boost your creativity and mental alertness or a late-afternoon nap to restore lost physical energy and boost your immune system--a nap around noon provides a little of both.

Snack smart and benefit from sustained energy throughout the day.

Cultivating a Gardening Habit

Discover the Health Benefits of Yard Work

Feeling the need to exercise, clean up your diet, meditate? Want to be more creative, get out and meet people, enjoy the outdoors, and slow down? There's one activity in which you can accomplish all of these objectives: gardening.

ENCOURAGING EXERCISE

Studies show that vigorous digging burns 500 calories an hour, weeding burns 210 calories, and mowing the lawn burns 400 calories. As a moderate exercise, gardening has been found to decrease the risk of heart disease and diabetes, and a study at the University of Arkansas found that gardening was almost as effective as weight lifting in reducing the risk for osteoporosis in women. So instead of taking that indoor aerobics class this summer, try mowing the lawn or planting an herb garden.

As with any exercise regimen, the key is to start at a comfortable pace and gradually work your way up to longer, more difficult activities. Your heart rate should be about the same as when you take a brisk walk.

IMPROVING YOUR DIET

Gardening will also likely help you eat better. Research shows that people who grow gardens eat more vegetables and fruits than those who don't. Growing fresh herbs, even in a container on the deck or balcony, is another great way to add flavor and freshness to home-cooked meals and an incentive to try new recipes.

BOOSTING YOUR SOCIAL LIFE

Gardening can also be quite social. Whether at a garden club, a community garden, or an online forum, people love to share ideas, solve common problems, and connect through mutual interests.

EASING STRESS

And finally, gardening is a great way to manage stress. Spending time outside and tuning in to the rhythms of nature, we're reminded to be patient, slow down, and breathe the fresh air. Whether growing flowers, vegetables, or herbs, a garden reminds us of our connection to life and the abundance that nature so freely gives.

Gardening burns calories and improves diet.

Here Comes the Sun

Updated UV Index Shines Light on Rays

A crucial warning system has been recently updated for your skin's protection. In compliance with the World Health Organization, the Environmental Protection Agency and the National Weather Service revamped the UV Index, a system created to alert people about the level of harmful ultraviolet (UV) light rays from the sun. Overexposure to UV rays can cause wrinkles and premature aging, skin cancer, cataracts, and immune system suppression.

Many factors influence the strength of UV rays: UV light is stronger in the summer, at higher altitudes, and in areas closer to the equator. It's also stronger at midday, from 10 a.m. to 4 p.m., when the sun is directly overhead.

The new UV index ranges from 0-11 with guidelines as follows:

0-2: **LOW.**

Minimal exposure for the average person, but watch for reflected UV from snow and water.

3-5: **MODERATE.**

Stay in the shade during midday. Cover-up outside.

6-7: **HIGH.**

Wear a hat, sunglasses, and a sunscreen with a minimum sun protection factor (SPF) of 15. Avoid midday sun.

8-10: **VERY HIGH.**

Take extra precautions, and avoid midday sun. Wear protective clothing.

11: **EXTREME.**

Take all precautions, seek shade, and avoid midday sun. If possible, stay indoors.

As part of its daily forecast, the National Weather Service publishes the UV index for each area of the country. Go to www.epa.gov/sunwise/uvindex.html and enter your zip code to find your UV index for the day. The Weather Channel, as well as most local TV stations, include the UV index in their weather forecast. It can also be found at www.weather.com.

For a detailed description of the UV index, or for more information on sun protection, visit www.epa.gov/sunwise.

Spring makes its own statement, so loud and clear that the gardener seems to be only one of the instruments, not the composer.

-~Geoffrey B. Charles

I wanted to let you all know that I am still in the game! Although I have had to minimize what I am able to do, my office is still open, and I am still seeing clients. Thank you for your support, thoughts and prayers!

I am currently offering Reflexology sessions which include a foot soak with Epsom salts and essential oils, Cranial Sacral sessions, Lymphatic Drainage Massage, and Raindrop Technique (known to help detox, boost your immune system and help fight colds and flu.) All sessions have been discounted, so call today and schedule a treatment you have never tried before!

Summer Detox Special!

Package of 4 sessions for \$200

Includes: 2 Reflexology sessions, 1 Raindrop Technique and 1 Lymphatic Drainage Massage

Mention this newsletter and receive \$10 off.
Offer expires June 30, 2012
